Time code
distributor with
optical
multimode
outputs

The family of fiber optic time distributors includes 3 models for distributing an optical signal on:
optical and analog outputs

Optical input/analog outputs

The TMO1045 provides 12xIRIGB126 analog outputs from one IRIGB126 optical input.

Optical input/Optical outputs

The TMO1145 provides 12xIRIGB 126 optical outputs from one IRIGB126 optical input.

Optical input/optical and analog outputs

The TMO2253 distributor provides 6 analog IRIG B126 outputs and 5 B006 optical outputs from an optical IRIGB126 input.

Operation

A front face LED panel, located to the right of the connector "FO IN" allows verifying that the IRIG B signal is present on the input of the unit.

The LED can take three states:

- Green: signal detected
- Red: no signal
- Off: Power off

Specifications

Connectors

Outputs IRIG B006 : SC connector
Outputs IRIG B126 $50\ \Omega$: BNC connector
entrée IRIGB00X, SC connector

IRIGB codes

The B006 and B126 IRIGB code are used. They respectively correspond to an unmodulated and modulated code B with calendar information, day of the year, hour, minute, second, and year (2 digits) in BCD.
